1083
[493] never seen again, and after a prêt' savane had read prayers over the spring the people again drew water from it.

Baka more often change themselves into gray or red pigs, but one ingenious baka was said to have transformed himself into a bicycle, which was seen traveling alone at night on the road from Port-au-Prince to Léogane.

776
789
824 Some people wear charms against the baka's malevolence; but the most effective weapon is the cocomacaque stick. The cocomacaque, or monkey palm, is a palm tree that grows only a few feet high. It has magical powers to drive off not only baka but other evil beings as well. When the tree is growing in its natural state, it is said, you must never mention its name in its own presence. Should you say within its hearing, for example, "Look at the cocomacaque," it will wilt and fall over, losing all its vital powers. The trunk of this midget palm is a favorite material for fashioning a walking stick or a short baton. A man going on a long journey into strange country may carry a cocomacaque stick with him to brandish at the crossroads where baka lurk, or to drive off strange animals that may be baka in disguise.

776
789
754 In their relationships with human beings, the baka are not always random. Sometimes, for a terrible price, they will undertake to make a man rich or to "eat" his enemies for him.

184
776
778 In some parts of Haiti, baka seemingly have found their way into the ranks of the loa. In the Congo-Guinée pantheon there is a deity called Bakulu Baka, or Babaku Baka. He is a malevolent spirit who "eats" people in the best baka tradition, and he lives, significantly, in the mapou tree, which is shunned by all good loa.

776
789
789
675 The *engagements*, or compacts, in which baka sometimes figure are usually made with another sort of creature, the *djab*, or devil. A djab is a manlike being but is superhuman, ferocious, and terrible. Some djab are small, some large, some innocent in appearance, some grotesque. They are supernatural sorcerers who deal out riches in exchange for human beings. A frustrated or desperate man may go to a djab and ask for a favor, which will usually be granted for a heart-rending price. Persons who appear to gain wealth suddenly may be suspected of having entered into an *engagement* with a powerful djab.

789
675 One story is about a man of Port-au-Prince who, needing a large sum of money, went to a famous djab who lives in a cave known as Trou Fourban. This powerful djab agreed to provide all the money required, but only on condition that the man deliver to him each year one of his children. The man suddenly came into a large fortune. But when the anniversary of his compact arrived, he did not go to Trou Fourban

rhythmically, to the accompaniment of drums, *catus*, or horns, while a singing leader composes topical songs in which the laborers join.

The tools which a rural Haitian chooses, and the way he uses them, often are in a West African tradition. He performs a multitude of tasks with his machete, or bush knife: weeding a garden, peeling an orange, cutting down a tree, making a drum or mortar, opening a coconut. It is an all-purpose tool, as it is in Africa. Until a few years ago it was supplemented by the extra-long, heavier, "double machete." The axe and the chisel are known and used too, but the machete is supreme.

[538]
The hoe is the tool for tilling the soil, even in the flat country, and even though the Haitian has horses and cattle which could pull a plow. Horses are for riding and not for pulling. In carrying loads, the Haitian peasant still prefers the heul to the shoulders. If he has a donkey, the donkey will carry for him. An old Haitian proverb goes: "Meçi Bondieu pou' bourrique li, si nous pas gainyain bourrique li faut Haitien pou' tout bagaille" (Thank God for the donkey, if we didn't have the donkey the Haitian would have to carry everything)." Generally speaking, the rough and rocky terrain of Haiti and inadequate secondary roads have

489

done nothing to encourage the use of carts or wagons.

Corn is stored in the trees, as in West Africa, or in granaries built upon stilts, also as in West Africa. The Haitian makes his fire in the African fashion, with several long sticks or poles meeting point-to-point in the heart of the fire. As the ends are consumed, the sticks are pushed toward the center. Grain is pulverized in large wooden mortars, as in West Africa, and winnowed in a woven tray. Fish traps are sometimes woven in the traditional West African manner, and fishermen often set their nets in converging spirals and beat the water with sticks to drive the fish to the center. And on the rivers and lakes are to be seen dugout canoes of a kind familiar on the inland waters of West Africa.

171

[834]
The folklore of the fields contains many themes known to the West African. One old Haitian farmer, discussing the spiritual relationship of the planter to the earth, declared that a man must be strong and potent when he plants, else the crops will be vitiated and sickly. For this reason, he said, a man must not plant seeds the day after he has had sexual intercourse, because he has been temporarily drained of his life-giving powers.²

171
538
The tale of the hoe that worked by itself in the fields is also widespread. It enters many animal and Bouki stories, and also is known in a form that is familiar in West Africa. In this story, there was once a man who owned a hoe which worked by itself whenever a magical formula was pronounced. It would stop working whenever the magical

unchanged from an earlier era. The prevailing quality of Haitian rural and craft industry, then, is one of great stability and conservatism.

- 493 At the same time, of course, major events since the revolution have left their imprint on this part of life. Hardly a roadside village in Haiti today, for instance, lacks an automobile mechanic, even though these men are mostly self-educated and work with hardly any tools. Their skills became part of Haitian culture in this century and are often of a simple order no longer typical of more developed areas. Tire tubes, for instance, are "vulcanized" by the use of an ingenious device made from a board and an old piston, kerosene providing the heat to make the seal; this technique, along with the sewing of damaged truck tires, was almost certainly introduced and diffused by the United States Marines.

But these quaint additions do not alter the fact that shop and factory industry are nearly absent, and extractive industry virtually nonexistent. Haiti's one alumina extraction enterprise, foreign-owned, is now shut down. There is but one flour mill, and that is foreign-owned as well. One or two textile mills and sugar factories, established with foreign capital, still function, as do a modern cement factory and a few other small plants established in the 1950s. These industries, scanty as they are, were of great importance to Haiti, since they represented substantial investments, held out the promise of reduced dependence on imports in significant categories, and contributed to the beginnings of an industrial proletariat. However, they involved only a tiny fraction of the national labor force, and they have not proved entirely successful. As a result, Haiti lacks any reserve of labor acquainted with modern industry, even though many people, both urban and rural, work at tasks that might be considered more industrial than agricultural.

171

Most important for the present discussion, the minor developments in Haitian industry have not led to an expanded market and have not resulted in any firm increase in productivity. Industrial growth, in the sense in which it has occurred in countries such as those of Western Europe—or for that matter in Mexico or Argentina—is entirely lacking. The absence of such growth is perhaps especially significant if Haiti be compared with a neighbor such as Jamaica or Puerto Rico. These countries, one now independent, the other a North American dependency—have both gained real increments from the investment activities of outsiders;

two rooms to house the whole family. "In these huts, filth and every species of uncleanness prevail, for the people give themselves up to their indolent and lazy habits. It is common to see the pigs and poultry herding with the family."³⁴² [515]

The furnishings in the huts were as simple as the construction. Rarely was there more than one bed, if that; the children of the family used mats for sleeping. A table, a stool, a couple of patched chairs, calabash bowls, an iron pot or two (and in later days, discarded gasoline tins), comprise the household equipment. 352 [415]

The fine roads of the French régime became rutted and washed, were overgrown with weeds, and soon reverted to wasteland or became nothing more than paths. Carriages ceased to be of any use, and there were few wagons; donkeys and horses became the regular means of transportation, and this was true until the Americans began to build roads again in 1916. The colonial régime had left a legacy of bridges, public buildings, parks, irrigation ditches; practically every improvement of this nature crumbled in slow decay and was not replaced. The temperate Dr. Brown closed his account of the Haiti of 1836 with the following paragraph: 653 492 493 491

To sum up all that might be said upon the actual condition of Hayti, poverty and degradation stare one in the face wherever he goes—and the state of the whole island will be fully understood in the United States when it is bluntly asserted, that the country is one continuous negro village, built of mud cabins, and unfurnished with the usual comforts of life. The population is, with small exceptions, an indolent, naked multitude, without sustenance or a disposition to make exertions to obtain it; without enormous vices, but petty and insignificant in every thing relating to human character, and not many removes from the tribes upon the Niger in point of civilization. The fact is indisputable, that as a nation the blacks of Saint Domingo are in a retrograde movement as regards intellectual improvement, and no obstacle seems to exist to prevent this descent to barbarism. The government and institutions of the country must for the present remain unstable, and it is difficult to pronounce what the changes involved in the future will produce. 114 105

Progress, as Westerners understand it, comes through contacts and competition, both of which were lacking to Haiti in large measure throughout the whole of the nineteenth century. While externally 177 178
